Amman, Jordan

Computer Engineering graduate with a strong foundation in software development, data structures, and object-oriented programming. Experienced in building applications and working with databases using multiple programming languages. Passionate about writing clean, efficient code and continuously improving technical skills.

Work Experience

Software Development Intern

Jul 2023 - Aug 2023

Yashb Solutions | Amman, Jordan

- Developed a web-based form to upload and process CSV data.
- Implemented backend functionality using PHP to insert data into a MySQL database.

Projects

Traffic Classification in Hazy Conditions (Graduation Project)

Apr 2024

- Developed a machine learning-based system using Python to classify traffic congestion levels under simulated hazy conditions.
- Applied transfer learning using EfficientNet-V2L to improve model accuracy.
- Preprocessed and structured data to optimize model performance.
- Tested and evaluated model accuracy to ensure reliable predictions.
- Awarded third place in the 11th National Technology Festival for this project, developed in collaboration with a colleague student.

Core Skills

Programming: Python, Java, JavaScript

Tools and Technologies: HTML, CSS, Git, PowerBI, Scikit-learn, SQL

Concepts: Data Structures, Algorithms, OOP

Education

University of Jordan

Oct 2019 - Jun 2024

Bachelor Computer Engineering

GPA: 3.67
